

### Use Case: Transfer Inventory to Another Dealer

Use Case Name	Transfer Inventory to Another Dealer
Description & Scenario	A dealership may become overstocked while another dealership faces inventory shortages. To balance stock levels, the Inventory Manager uses the system to transfer vehicles efficiently. This process is designed to be intuitive, allowing the manager to select vehicles and complete the transfer with minimal effort.
Use Frequency	High. Multiple times per day, depending on how frequently inventory updates are needed.
Actor	Dealership Inventory Manager – the primary user responsible for managing vehicle transfers.
Preconditions	<ul style="list-style-type: none"><li>- The Inventory Manager is logged into the system and familiar with its operation.</li><li>- The system contains up-to-date inventory data.</li><li>- The receiving dealership has room for the incoming vehicles and accepts acquisitions.</li><li>- The dealership routinely maintains accurate inventory records.</li></ul>
Postconditions (Success)	<ul style="list-style-type: none"><li>- The inventory transfer is successfully recorded in the system.</li><li>- Rental status of vehicles remains unchanged.</li><li>- Vehicles' new dealership association can be queried for confirmation.</li></ul>
Normal Flow	<ol style="list-style-type: none"><li>1. Inventory Manager selects one or more vehicles from the inventory.</li><li>2. The manager clicks the 'Transfer' button.</li><li>3. The system updates vehicle details to reflect the transfer.</li><li>4. The system confirms the successful update to the Inventory Manager.</li></ol>
Alternative Flows	<ul style="list-style-type: none"><li>- If the system encounters an error during the transfer process, an error message is displayed and the operation is aborted.</li></ul>
